# **User study**

### Step 1: 收集基本信息

- 年龄
- 性别
- 教育背景

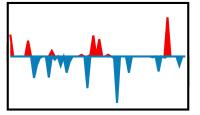

## Step 2.1: 进行user study的顺序

实验是三种设计的对比,每种设计需要做72组实验,大概需要30mins:

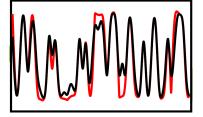

A:

B:

C:

#### 共有三种试验,第3n+i个实验者做的是第i种

A	В	С
В	С	A
С	A	В

### Step 2.1: user study task 的设置

Variable:

Frequency:

Noise:

Positive/Negative

Scaling: longer/equal/shorter

Glyphs: baseline/difference/wave

Repetition:3 Sensor\_num:2

3\*2\*2\*3\*3=108

108\*30s

Task:

Find out the most relevant time slot in each sensor

Hypothesis:

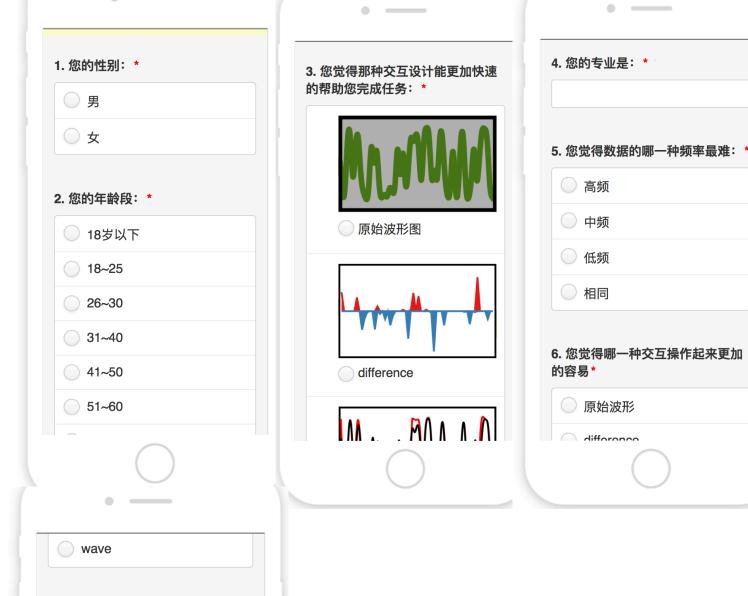

H1:Frequency:medium

H2:Noise: High H3:Negative

H4:longer&shorter

### Step 3: questionnaire

初步草稿 有待完善...

8. 您觉得wave有哪些不足值得改进

7. 您觉得哪一种关联更难\*

正相关

**负相关**
